

Pre-start checklist

An inspection of the Elevating Work Platform needs to be carried out each day the machine is used. Put a tick in the *Safe to Work* box if everything is OK, and a cross if it is not.

Day	Date	Safe to work	Signature of operator

If any day is given a cross, describe the hazard or fault encountered, and the action taken to minimise the risk, including whether the problem was reported to another person.

Date	Hazard or fault	Corrective action taken

Safety checklist for EWP will include:

- All controls working properly, including the emergency stop device
- Emergency lowering function operating normally
- Work platform and extension slides are clean, dry and clear of debris
- Guard rails in good condition and safety locking pins operational
- Tyres and wheels in good condition; brakes and steering working normally
- Hydraulic fluid topped up; no leaks in hydraulic or pneumatic systems
- All lights and motion alarms working normally
- Coolant level checked; engine oil topped up; no major oil leaks
- Ram, tip mechanisms and hydraulic controls in good condition and working normally
- No significant structural damage to machine
